1. TOL-Tamil/Other Languages,
  2. E – English
- CC-Core course
  - Generic Elective (Allied)
  - SEC-Skill Enhancement Course
  - FC-Foundation Course
  - DSE – Discipline Specific Elective

**Allied Subjects offered by other departments to B.Sc. Data Science students**

- Semester I : Allied I: Theory : Numerical Methods with Applications  
Allied I Practical : Numerical Methods with Applications Lab
- Semester II: Allied II: Theory: Ancillary Mathematics – II  
Allied II Practical : Ancillary Mathematics – II Lab
- Semester III: Allied III: Theory: Statistics - I  
Allied III : Practical: Statistics – I Lab
- Semester IV: Allied IV: Theory: Statistics - II  
Allied IV : Practical: Statistics – II Lab

**Allied Subjects offered by B.Sc. Data Science department to other department students**

- Semester I : Allied I: Theory : Database Management System  
Allied I Practical : Database Management System Lab
- Semester II: Allied II: Theory: Office Automation  
Allied II Practical : Office Automation Lab
- Semester III: Allied III: Theory: Operations Research  
Allied III : Practical: Operations Research Lab
- Semester IV: Allied IV: Theory: Internet and Web Design  
Allied IV : Practical: Internet and Web Design Lab

## Semester I

| Subject Code              | Subject Name  | Category    | L | T | P | S | Credits                  | Inst. Hours | Marks               |          |       |
|---------------------------|---|-------------|---|---|---|---|--------------------------|-------------|---------------------|----------|-------|
|                           |   |             |   |   |   |   |                          |             | CIA                 | External | Total |
| 23BDS1C1                  | PROGRAMMING IN C  | Core Theory | 5 | - | - | - | 4                        | 5           | 25                  | 75       | 100   |
| <b>Learning Objective</b> |   |             |   |   |   |   |                          |             |                     |          |       |
| LO1                       | To familiarize the students with the Programming basics and the fundamentals of C, Data types in C, Mathematical and logical operations.  |             |   |   |   |   |                          |             |                     |          |       |
| LO2                       | To understand the concept using if statements and loops   |             |   |   |   |   |                          |             |                     |          |       |
| LO3                       | This unit covers the concept of Arrays and Functions  |             |   |   |   |   |                          |             |                     |          |       |
| LO4                       | This unit covers the concept of Structures and unions and Preprocessors   |             |   |   |   |   |                          |             |                     |          |       |
| LO5                       | To understand the concept of implementing pointers.   |             |   |   |   |   |                          |             |                     |          |       |
|                           | <b>Contents</b>   |             |   |   |   |   |                          |             | <b>No. of Hours</b> |          |       |
| <b>UNIT I</b>             | <p><b>Overview of C:</b> Importance of C, sample C program, C program structure, executing C program.</p> <p><b>Constants, Variables, and Data Types:</b> Character set, C tokens, keywords and identifiers, constants, variables, data types, declaration of variables, Assigning values to variables---Assignment statement, declaring a variable as constant, as volatile.</p> <p><b>Operators and Expression:</b> Arithmetic, Relational, logical, assignment, increment, decrement, conditional, bitwise and special operators, arithmetic expressions, operator precedence, type conversions, mathematical functions</p> <p><b>Managing Input and Output Operators:</b> Reading and writing a character, formatted input, formatted output.</p> |             |   |   |   |   |                          |             | 15                  |          |       |
| <b>UNIT II</b>            | <p><b>Decision Making and Branching:</b> Decision making with If, simple IF, IF ELSE, nested IF ELSE , ELSE IF ladder, switch, GOTO statement.</p> <p><b>Decision Making and Looping:</b> While, Do-While, For, Jumps in loops.</p>   |             |   |   |   |   |                          |             | 15                  |          |       |
| <b>UNIT III</b>           | <p><b>Arrays:</b> Declaration and accessing of one &amp; two-dimensional arrays, initializing two-dimensional arrays, multidimensional arrays.</p> <p><b>Functions:</b> The form of C functions, Return values and types, calling a function, categories of functions, Nested functions, Recursion, functions with arrays, call by value, call by reference, storage classes-character arrays and string functions.</p>   |             |   |   |   |   |                          |             | 15                  |          |       |
| <b>UNIT IV</b>            | <p><b>Structures and Unions:</b> Defining, giving values to members, initialization and comparison of structure variables, arrays of structure, arrays within structures, structures within structures, structures and functions, unions.</p> <p><b>Preprocessors:</b> Macro substitution, file inclusion.</p>  |             |   |   |   |   |                          |             | 15                  |          |       |
| <b>UNIT V</b>             | <p><b>Pointers:</b> definition, declaring and initializing pointers, accessing a variable through address and through pointer, pointer expressions, pointer increments and scale factor, pointers and arrays, pointers and functions, pointers and structures.</p>  |             |   |   |   |   |                          |             | 15                  |          |       |
|                           | <b>Total</b>  |             |   |   |   |   |                          |             | <b>75</b>           |          |       |
| <b>Course Outcomes</b>    |   |             |   |   |   |   | <b>Programme Outcome</b> |             |                     |          |       |
| CO                        | On completion of this course, students will   |             |   |   |   |   |                          |             |                     |          |       |

|                        |  |             |
|------------------------|--|-------------|
| CO1                    | Remember the program structure of C with its syntax and semantics  | PO1,PO3,PO5 |
| CO2                    | Understand the programming principles in C (data types, operators, branching and looping, arrays, functions, structures, pointers and files) | PO2,PO3,PO6 |
| CO3                    | Apply the programming principles learnt in real-time problems  | PO3,PO4,PO5 |
| CO4                    | Analyze the various methods of solving a problem and choose the best method  | PO4,PO5,PO6 |
| CO5                    | Code, debug and test the programs with appropriate test cases  | PO5,PO6     |

| UNIT                    | List of Exercises  |                |   |   |   |   |         | No. of Hours | Course Objectives |          |       |
| <b>UNIT I</b>           | <b>Variables, Data types, Constants and Operators</b><br>1.Evaluation of expression ex: $((x+y)^2 * (x+z))/w$<br>2.Temperature conversion problem (Fahrenheit to Celsius)<br>3.Program to convert days to months and days (Ex: 364 days = 12 months and 4 days)<br>4.Solution of quadratic equation<br>5.Salesman salary (Given: Basic Salary, Bonus for every item sold, commission on the total monthly sales) |                |   |   |   |   |         | 6            |                   |          |       |
| <b>UNIT II</b>          | <b>Decision making Statements</b><br>6.Maximum of three numbers<br>7.Calculate Square root of five numbers (using gototement)<br>8.Pay-Bill Calculation for different levels of employee (Switch statement)<br>9. Fibonacci series<br>10.Floyds Triangle<br>11.Pascal's Triangle   |                |   |   |   |   |         | 6            |                   |          |       |
| <b>UNIT III</b>         | <b>Arrays, Functions and Strings</b><br>12.Prime numbers in an array<br>13.Sorting data (Ascending and Descending)<br>14.Matrix Addition and Subtraction<br>15.Matrix Multiplication<br>16.Function with no arguments and no return values<br>17.Function that convert lower case letters to upper case<br>18. Factorial using recursion.<br>19.Perform String Operations using Switch Case.                     |                |   |   |   |   |         | 6            |                   |          |       |
| <b>UNIT IV</b>          | <b>Structures and Macros</b><br>20.Structure that describes a Hotel (name, address, grade, avg room rent, number of rooms) Perform some operations (list of hotels of a given grade etc.)<br>21. Using Pointers in Structures.<br>22.Cricket team details using Union.<br>23.Write a macro that calculates the max and min of two numbers<br>24.Nested macro to calculate Cube of a number.                      |                |   |   |   |   |         | 6            |                   |          |       |
| <b>UNIT V</b>           | <b>Pointers and Files</b><br>25.Evaluation of Pointer expressions<br>26.Function to exchange two pointer values<br>27.Creation, insertion and deletion in a linked list<br>28.Program to read a file and print the data.   |                |   |   |   |   |         | 6            |                   |          |       |

|                        |  |                          |
|------------------------|--|--------------------------|
|                        | 29. Program to receive a file name and a line of text as command line arguments and write the text to the file<br>30. Program to copy the content of one file to another file. |                          |
|                        | <b>Total</b>   | <b>30</b>                |
| <b>Course Outcomes</b> |  | <b>Programme Outcome</b> |
| CO                     | On completion of this course, students will  |                          |
| 1                      | Remember the program structure of C with its syntax and semantics  | PO1,PO3,PO5              |

**Learning Objectives:** (for teachers:what they have to do in the class/lab/field)

- To improve the quantitative skills of the students
- To prepare the students for various competitive exams

CO1: To gain knowledge on LCM and HCF and its related problems

CO2: To get an idea of age, profit and loss related problem solving.

CO3: Able to understand time series simple and compound interests

CO4: Understanding the problem related to probability, and series

CO5: Able to understand graphs, charts

| Units              | Contents   | Required Hours |
|--------------------|--|----------------|
| UNIT I             | Numbers- HCF and LCM of numbers-Decimal fractions- Simplification- Square roots and cube roots- Average- problems on Numbers   | 6              |
| UNIT II            | Problems on Ages - Surds and Indices - percentage - profits and loss - ratio and proportion-partnership- Chain rule.   | 6              |
| UNIT III           | Time and work - pipes and cisterns - Time and Distance - problems on trains -Boats and streams - simple interest - compound interest - Logarithms – Area-Volume and surface area-races and Games of skill. | 6              |
| UNIT IV            | Permutation and combination-probability-True Discount-Bankers Discount - Height and Distances-Odd man out & Series.  | 6              |
| UNIT V             | Calendar - Clocks - stocks and shares - Data representation - Tabulation – Bar Graphs- Pie charts-Line graphs  | 6              |
| <b>TOTAL HOURS</b> |  | <b>30</b>      |

| LO3                       | To understand the object oriented concepts in python  |             |   |   |   |   |         |                          |       |          |                     |
| LO4                       | To apply various language constructs to write simple programs in python   |             |   |   |   |   |         |                          |       |          |                     |
| LO5                       | To distinguish the various constructs used in python.   |             |   |   |   |   |         |                          |       |          |                     |
| <b>Contents</b>           |   |             |   |   |   |   |         |                          |       |          | <b>No. of Hours</b> |
| <b>UNIT I</b>             | Introduction to Python: Features of Python - How to Run Python - Identifiers – Reserved Keywords - Variables – Comments in Python - Indentation in Python – Multi-Line Statements - Multiple Statement Group (Suite) - Quotes in Python – Input, Output and Import Functions - Operators. Data Types and Operations: Numbers – Strings – List – Tuple – Set – Dictionary – Data type conversion.                                |             |   |   |   |   |         |                          |       |          | 15                  |
| <b>UNIT II</b>            | Flow Control: Decision Making – Loops – Nested Loops – Types of Loops. Functions: Function Definition – Function Calling - Function Arguments - Recursive Functions - Function with more than one return value.   |             |   |   |   |   |         |                          |       |          | 15                  |
| <b>UNIT III</b>           | Modules and Packages: Built-in Modules - Creating Modules - import Statement – Locating Modules - Namespaces and Scope - The dir() function - The reload() function - Packages in Python - Date and Time Modules. File Handling- Directories in Python.   |             |   |   |   |   |         |                          |       |          | 15                  |
| <b>UNIT IV</b>            | Object-Oriented Programming: Class Definition - Creating Objects - Built-in Attribute Methods - Built-in Class Attributes- Destructors in Python – Encapsulation - Data Hiding – Inheritance - Method Overriding- Polymorphism.   |             |   |   |   |   |         |                          |       |          | 15                  |
| <b>UNIT V</b>             | Exception Handling: Built-in Exceptions-Handling Exceptions Exception with Arguments - Raising Exception - User-defined Exception - Assertions in Python. Regular Expressions: The match() function - The search() function - Search and Replace - Regular Expression Modifiers: Option Flags-Regular Expression Patterns Character Classes-Special Character Classes - Repetition Cases - findall() method – compile() method. |             |   |   |   |   |         |                          |       |          | 15                  |

| <b>UNIT II</b>             | <b>Introduction to Python</b> Features of Python - How to Run Python – Identifiers-Reserved Keywords- Variables - Comments in Python - Indentation in Python - Multi-Line Statements- Input, Output and Import Functions- Operators. Data Types and Operations: Numbers -Strings -List -Tuple - Set -Dictionary - Mutable and Immutable Objects - Data Type Conversion. Flow Control: Decision Making-Loops-Nested Loops-Control Statements- Types of Loops-List Comprehensions-Set Comprehensions-Dictionary Comprehensions-Nested Dictionaries. |          |   |   |   |     |         |                              |          | <b>15</b>            |
| <b>UNIT III</b>            | <b>Functions</b> Function Definition - Function Calling - Function Arguments - Anonymous Functions (Lambda Functions) - Recursive Functions - Modules and Packages: Built-in Modules - Creating Modules - import Statement- Namespaces and Scope - The dir() function - The reload() function -Packages in Python - Date and Time Modules – Numpy Libraries and Data Manipulation Using Pandas  |          |   |   |   |     |         |                              |          | <b>15</b>            |
| <b>UNIT IV</b>             | <b>File Handling and Object Oriented Programming</b> Opening a File- Closing a File - Writing to a File - Reading from a File - File Methods - Renaming a File - Deleting a File - Directories in Python. Regular Expressions. Class Definition - Creating Objects - Built-in Attribute Methods - Built-in Class Attributes - Destructors in Python – Encapsulation - Data Hiding – Inheritance-Method Overriding – Polymorphism - Exception Handling   |          |   |   |   |     |         |                              |          | <b>15</b>            |
| <b>UNIT V</b>              | <b>Database Programming and Visualizations</b> Connecting to a Database - Creating Tables - INSERT Operation - UPDATE Operation - DELETE Operation - READ Operation - Transaction Control -Disconnecting from a Database - Exception Handling in Databases - GUI Programming – CGI Programming- Data Visualizations using Matplotlib – histograms, bar charts, pie charts.  |          |   |   |   |     |         |                              |          | <b>15</b>            |
| <b>TOTAL HOURS</b>         |   |          |   |   |   |     |         |                              |          | <b>75</b>            |
| <b>Course Outcomes</b>     |   |          |   |   |   |     |         | <b>Programme Outcomes</b>    |          |                      |
| CO                         | On completion of this course, students will   |          |   |   |   |     |         |                              |          |                      |
| CO1                        | To explain the basic concepts of data science and its application   |          |   |   |   |     |         | PO1, PO2, PO3, PO4, PO5, PO6 |          |                      |

**OBJECTIVES:**

To build websites and software, automate tasks, and conduct data analysis. Open Source and Community Development.

| LIST OF PROGRAMS  | Required Hours   |
|---|------------------|
| <ol style="list-style-type: none"> <li>1. Demonstrate the working of “id” and “type” functions.</li> <li>2. Find all prime numbers within a given range.</li> <li>3. Print n terms of Fibonacci series using iteration.</li> <li>4. Demonstrate use of slicing in string.</li> <li>5. Compute the frequency of the words from the input. The output should output after sorting the key alphanumerically.</li> <li>6. Write a program that accepts a comma separated sequence of words as input and prints the words in a comma-separated sequence after sorting them alphabetically.</li> <li>7. Demonstrate use of list &amp; related functions.</li> <li>8. Demonstrate use of Dictionary &amp; related functions.</li> <li>9. Demonstrate use of tuple &amp; related functions.</li> <li>10. Implement stack using list.</li> <li>11. Implement queue using list.</li> <li>12. Read and write from a file.</li> <li>13. Copy a file.</li> <li>14. Demonstrate working of classes and objects.</li> <li>15. Demonstrate class method &amp; static method.</li> <li>16. Demonstrate constructors.</li> <li>17. Demonstrate inheritance.</li> <li>18. Demonstrate aggregation/composition.</li> <li>19. Create a small GUI application for insert, update and delete in a table.</li> <li>20. Bar charts, histograms and PIE charts</li> </ol> | <p><b>60</b></p> |

| <b>Course Outcomes:</b> (for students: To know what they are going to learn)<br><b>CO1:</b> Understand the basic concepts of ERP.<br><b>CO2:</b> Identify different technologies used in ERP<br><b>CO3:</b> Understand and apply the concepts of ERP Manufacturing Perspective and ERP Modules<br><b>CO4:</b> Discuss the benefits of ERP<br><b>CO5:</b> Apply different tools used in ERP  |   |          |   |   |   |   |         |                |          |       |
| Units   | Contents  |          |   |   |   |   |         | Required Hours |          |       |
| <b>Unit I</b>   | ERP Introduction, Benefits, Origin, Evolution and Structure; Conceptual Model of ERP, the Evolution of ERP, the Structure of ERP, Components and needs of ERP, ERP Vendors; Benefits & Limitations of ERP Packages.     |          |   |   |   |   |         | 6              |          |       |
| <b>Unit II</b>  | Need to focus on Enterprise Integration/ERP; Information mapping; Role of common shared Enterprise database; System Integration, Logical vs. Physical System Integration, Benefits & limitations of System Integration. |          |   |   |   |   |         | 6              |          |       |
| <b>Unit III</b>   | ERP Marketplace and Marketplace Dynamics: Market Overview, Marketplace Dynamics, the Changing ERP Market. ERP- Functional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain.  |          |   |   |   |   |         | 6              |          |       |
| <b>Unit IV</b>  | ERP Implementation Basics, , ERP implementation Strategy, ERP Implementation Life Cycle ,Pre- Implementation task, Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.                 |          |   |   |   |   |         | 6              |          |       |
| <b>Unit V</b>   | ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into or- ganizational culture. Using ERP tool: either SAP or ORACLE format to case study.          |          |   |   |   |   |         | 6              |          |       |

**Learning Resources:**

- **Recommended Texts**

1. Enterprise Resource Planning – Alexis Leon, Tata McGraw Hill.

- **Reference Books**

1. Enterprise Resource Planning – Diversified by Alexis Leon, TMH.
2. Enterprise Resource Planning – Ravi Shankar & S. Jaiswal , Galgotia

| 23BDS4P1     | <b>OBJECT ORIENTED PROGRAMMING WITH JAVA LAB</b> | CC VIII  | - | - | 3 | IV | 3       | 25    | 75       | 100   |

**Learning Objectives:**

1. Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
2. Read and make elementary modifications to Java programs that solve real-world problems.
3. Be able to create an application using string concept.
4. Be able to create a program using files in application.
5. Be able to create an Applet to create an application.

**Required Hours**

**Lab Exercises:**

1. Program using Class and Object.
2. Program using Constructors.
3. Program using Command-Line Arguments.
4. Program using Random Class.
5. Program using Vectors.
6. Program using String Tokenizer Class.
7. Program using Interface.
8. Program using all forms of Inheritance.
9. Program using String class.
10. Program using String Buffer class.
11. Program using Exception Handling.
12. Implementing Thread based applications
13. Program using Packages.
14. Program using Files.

**Applets:**

15. Working with Colors and Fonts.
16. Parameter passing technique.
17. Drawing various shapes using Graphical statements.
18. Usage of AWT components and Listener in suitable applications.

**60**

**Learning Objectives:**(forteachers:whattheyhavetodointheclass/lab/field)

- To learn the basic web concepts and to create rich internet applications that use most recent client-side programming technologies.
- To learn the basics of HTML, DHTML, XML, CSS, Java Script and AJAX.

**Course Outcomes:**(forstudents:Toknowwhattheyaregoingtolearn)

**CO1:** Ability to Develop and publish Web pages using Hypertext Markup Language(HTML).

**CO2:** Ability to optimize page styles and layout with Cascading Style Sheets(CSS).

**CO3:** Ability to Understand, analyze and apply the role of languages to create a capstone

**CO4:** Website using client-side web programming languages like HTML, DHTML, CSS, XML, JavaScript, and AJAX

**CO5:** Able to understand the concept of jQuery and AngularJS

| Units           | Contents   | Required Hours |
|-----------------|--|----------------|
| <b>Unit I</b>   | HTML: HTML-Introduction-tag basics- page structure-adding comments working with texts, paragraphs and line break. Emphasizing test- heading and horizontal rules-list-font size, face and color-alignment- links-tables-frames   | <b>6</b>       |
| <b>Unit II</b>  | Forms & Images Using Html: Graphics: Introduction-How to work efficiently with images in web pages, image maps, GIF animation, adding multimedia, data collection with html forms textbox, password, list box, combo box, text area, tools for building web page front page                        | <b>6</b>       |
| <b>Unit III</b> | XML & DHTML: Cascading style sheet (CSS)-what is CSS-Why we use CSS-adding CSS to your web pages-Grouping styles-extensible markup language (XML).   | <b>6</b>       |
| <b>Unit IV</b>  | JavaScript: Client side scripting, What is JavaScript, How to develop JavaScript, simple JavaScript, variables, functions, conditions, loops and repetition.   | <b>6</b>       |
| <b>Unit V</b>   | Ajax: Introduction, advantages & disadvantages, Purpose of it, ajax based web application, alternatives of ajax Java Script & AJAX: Introduction to array-operators, making statements-date & time-mathematics- strings-Event handling-form properties. AJAX. Introduction to jQuery and AngularJS | <b>6</b>       |

## Semester V

| Subject Code | Subject Name                  | Category        | L | T | P | S | Credits | Marks |          |       |
|--------------|-------------------------------|-----------------|---|---|---|---|---------|-------|----------|-------|
|              |                               |                 |   |   |   |   |         | CIA   | External | Total |
| 23BDS5C2     | <b>RDBMS LAB USING ORACLE</b> | <b>CC<br/>X</b> | - | - | 5 | V | 4       | 25    | 75       | 100   |

**Learning Objectives:**

1. To explain basic database concepts, applications, data models, schemas and instances.
2. To demonstrate the use of constraints and relational algebra operations
3. Describe the basics of SQL and construct queries using SQL.
4. To emphasize the importance of normalization in databases
5. To facilitate students in Database design

**LAB EXERCISES:****SQL:**

1. DDL commands.
2. Specifying constraints-Primary Key, Foreign Key, Unique, Check, Not Null.
3. DML commands.
4. Set Operations.
5. Joins.
6. Sub-queries.

**PL/SQL:**

7. Control Constructs.
8. Exception Handlers.
9. Implicit Cursor.
10. Explicit Cursor.
11. Procedures.
12. Functions.
13. Triggers.
14. TCL Commands usage (Commit, Rollback, Savepoint)

| <b>Course Outcomes</b> |  |
|------------------------|--|
| CO                     | On completion of this course, students will  |
| CO1                    | To demonstrate the characteristics of Database Management Systems. To study about the concepts and models of database.<br>To impart the concepts of System Development Life Cycle and E-R Model. |

**Learning Objectives:**

- To provide strong foundation on fundamental concepts in Computing Intelligence
- To apply basic principles of Artificial Intelligence and solutions that require problem solving, influence, perception, knowledge representation and learning

**Course Outcomes:**

- CO1:** Describe the fundamentals of artificial intelligence concepts and searching techniques.  
**CO2:** Develop the fuzzy logic sets and membership function and defuzzification techniques.  
**CO3:** Understand the concepts of Neural Network and analyze and apply the learning techniques  
**CO4:** Understand the artificial neural networks and its applications  
**CO5:** Understand the concept of Genetic Algorithm and Analyze the optimization problems using GAs.

| Units           | Contents  | Required Hours |
|-----------------|---|----------------|
| <b>Unit I</b>   | Introduction to AI: Problem formulation – AI Applications – Problems – State Space and Search – Production Systems – Breadth First and Depth First – Travelling Salesman Problem – Heuristic search techniques: Generate and Test – Types of Hill Climbing.   | <b>12</b>      |
| <b>Unit II</b>  | Fuzzy Logic Systems: Notion of fuzziness – Operations on fuzzy sets – T-norms and other aggregation operators – Basics of Approximate Reasoning – Compositional Rule of Inference – Fuzzy Rule Based Systems – Schemes of Fuzzification – Inferencing – Defuzzification – Fuzzy Clustering – fuzzy rule-based classifier.   | <b>12</b>      |
| <b>Unit III</b> | Neural Networks: What is Neural Network, Learning rules and various activation functions, Single layer Perceptions, Back Propagation networks, Architecture of Backpropagation (BP) Networks, Back propagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications. | <b>12</b>      |
| <b>Unit IV</b>  | <b>Artificial Neural Networks:</b> Fundamental Concepts – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Linear Separability – Hebb Network.   | <b>12</b>      |
| <b>Unit V</b>   | <b>Genetic Algorithm:</b> Introduction – Biological Background – Genetic Algorithm Vs Traditional Algorithm – Basic Terminologies in Genetic Algorithm – Simple GA – General Genetic Algorithm – Operators in Genetic Algorithm.  | <b>12</b>      |

|                            |   |            |   |   |   |   |         | CIA       | External             | Total |
| 23BDS6E2                   | <b>ANALYTICS FOR SERVICE INDUSTRY</b>   | <b>DSE</b> | 5 | - | - | - | 3       | 25        | 75                   | 100   |
| <b>Learning Objectives</b> |   |            |   |   |   |   |         |           |                      |       |
| <b>LO1</b>                 | Recognize challenges in dealing with data sets in service industry.   |            |   |   |   |   |         |           |                      |       |
| <b>LO2</b>                 | Identify and apply appropriate algorithms for analyzing the healthcare, Human resource, hospitality and tourism data.   |            |   |   |   |   |         |           |                      |       |
| <b>LO3</b>                 | Make choices for a model for new machine learning tasks.  |            |   |   |   |   |         |           |                      |       |
| <b>LO4</b>                 | To identify employees with high attrition risk.   |            |   |   |   |   |         |           |                      |       |
| <b>LO5</b>                 | To Prioritizing various talent management initiatives for your organization.  |            |   |   |   |   |         |           |                      |       |
| <b>UNIT</b>                | <b>Contents</b>   |            |   |   |   |   |         |           | <b>No. Of. Hours</b> |       |
| <b>Unit I</b>              | <b>Healthcare Analytics :</b> Introduction to Healthcare Data Analytics- Electronic Health Records– Components of EHR- Coding Systems- Benefits of EHR- Barrier to Adopting HER Challenges-Phenotyping Algorithms. Biomedical Image Analysis and Signal Analysis- GenomicData Analysis for Personalized Medicine. Review of Clinical PredictionModels.  |            |   |   |   |   |         |           | <b>12</b>            |       |
| <b>Unit II</b>             | <b>Healthcare Analytics Applications :</b> Applications and Practical Systems for Healthcare– Data Analytics for Pervasive Health- Fraud Detection in Healthcare-Data Analytics for Pharmaceutical Discoveries- Clinical Decision Support Systems- Computer- Assisted Medical Image Analysis Systems- Mobile Imaging and Analytics for Biomedical Data. |            |   |   |   |   |         |           | <b>12</b>            |       |
| <b>Unit III</b>            | <b>HR Analytics:</b> Evolution of HR Analytics, HR information systems and data sources, HR Metric and HR Analytics, Evolution of HR Analytics; HR Metrics and HR Analytics; Intuition versus analytical thinking; HRMS/HRIS and data sources; Analytics frameworks like LAMP, HCM:21(r) Model.   |            |   |   |   |   |         |           | <b>12</b>            |       |
| <b>Unit IV</b>             | <b>Performance Analysis:</b> Predicting employee performance, Training requirements, evaluating training and development, Optimizing selection and promotion decisions.   |            |   |   |   |   |         |           | <b>12</b>            |       |
| <b>Unit V</b>              | <b>Tourism and Hospitality Analytics:</b> Guest Analytics – Loyalty Analytics – Customer Satisfaction – Dynamic Pricing – optimized disruption management – Fraud detection in payments.  |            |   |   |   |   |         |           | <b>12</b>            |       |
| <b>TOTAL HOURS</b>         |   |            |   |   |   |   |         | <b>60</b> |                      |       |

| <b>Course Outcomes</b> |   | <b>Programme Outcomes</b>    |
|------------------------|---|------------------------------|
| CO                     | On completion of this course, students will   |                              |
| CO1                    | Understand and critically apply the concepts and methods of business analytics  | PO1, PO2, PO3, PO4, PO5, PO6 |
| CO2                    | Identify, model and solve decision problems in different settings.  | PO1, PO2, PO3, PO4, PO5, PO6 |
| CO3                    | Interpret results/solutions and identify appropriate courses of action for a given managerial situation whether a problem or an opportunity.  | PO1, PO2, PO3, PO4, PO5, PO6 |
| CO4                    | Create viable solutions to decision making problems.  | PO1, PO2, PO3, PO4, PO5, PO6 |
| CO5                    | Instill a sense of ethical decision-making and a commitment to the long-run welfare of both organizations and the communities they serve.   | PO1, PO2, PO3, PO4, PO5, PO6 |
